

CLIENT

An exclusive fleet operator for travel vehicles with 900+ destinations across India.

REQUIREMENT

The client required a dependable wireless internet solution for their moving vehicles to ensure a stable connection. Additionally, they sought a source IP for security measures, protecting against cyber-attacks and unauthorised access.

CHALLENGE

The client encountered a challenge in achieving consistent and reliable internet connectivity, especially for moving vehicles.

- Wired internet was not feasible for moving vehicles.
- Poor signal in some locations with cellular dongles.
- Manual SIM changeover and no fallback option.
- Security concerns without a source IP.
- Lack of Public/Static IP for remote monitoring.

SOLUTION

Viva provided a cutting-edge connectivity solution tailored to their needs. Viva Fusion is a Software-defined Internet Leased Line with a complete cellular-based wireless internet solution.

- Viva Fusion wireless includes a proprietary modem with SIM slots, an antenna for high power, and WAN ports.
- Network sustainability on the move using various cellular networks with the available carrier signal at the locations.
- Carrier-level redundancy with automatic traffic shiftover.
- Our proprietary modem ensures carrier-level redundancy.
- Viva Fusion software enables a static IP for cellular networks, meeting security requirements.
